

Toggle alarm state requirement

ID:	005
Use case / scenario:	Toggle alarm state
Trigger:	The user selects or unselects the alarm in the alarm list (using a checkbox)
Precondition:	A alarm has to be set(added)

Basic path

The user navigates to the alarm list view and clicks the checkbox besides the alarm to toggle the state. If checkbox is unchecked, the alarm is disabled och clicking it will reenable it and vice versa.

The checkbox indicates the state of the alarm.

Exception path

No exceptional path

Post condition

The alarm in question must be disabled if it were to be enabled and enabled if it were to be disabled.
