

Set alarm requirement

ID	001
Use case / scenario:	Set alarm
Trigger:	The user clicks add alarm button
Precondition:	Application must be started

Basic path

User selects the time when the alarm is supposed to go off in either explicit time or in a time interval and clicks "Set alarm" button.

User is then shown a confirmation message and the time left until the alarm time.

Example:

"Alarm is set to 18:00 - 5h 14m left"

Exception path

1. User selects a time not possible (for example 25:74

The highest possible time i selected (23:59)

2. User selects a time that already "alarmed"

User is shown a message of the fact.

Post condition

The alarm is set to the specified time and added to the alarm list.
