

Actionbar navigation requirement

ID:	009
Use case / scenario:	The user navigates backwards by using the actionbar.
Trigger:	The user press the back button(icon).
Precondition:	The android device must have Honeycomb or later OS.

Basic path

The user press the back button(icon) in the actionbar. This will close the current activity and start the activity one step up in the hierarchy.

Exception path

1. If the active activity is already the highest in the application hierarchy.
The button will then not be displayed.

Post condition

The active activity must've changed after the user presses the button.
