Remove alarm requirement

ID: 006

Use case / scenario: Remove alarm

Trigger: User long-presses the alarm in the alarm list
                                                 view and presses Remove alarm

Precondition: At least on alarm has to be added

Basic path
Same as the trigger and when the user has pressed the remove button, the alarm will be
removed from the list to indicate it has been removed.
Exception path
1. The user long-presses an area that does not contain an alarm
Nothing will happen.

Post condition
The alarm that were long-pressed must be removed and therefore also disabled.
