Alarmy User guide

Alarmy is an Android application used for setting alarms. You can set an alarm at a specific time or set it to an interval.

Alarmy supports a snooze function and small mini-games that must be completed before the user is allowed to dismiss the alarm. This is useful for people that has a penchant for snoozing one time too many.

The application can use the device's installed sounds as well as your own custom sound files for alarms.

What you can do:
- Set alarm, by tapping the "Add alarm"-button, set a time, and press the '✓' - button, either from the action-bar or from the menu (depending on which version of android is installed on the device).
- Choose whether you want an alarm at a specific time, or after a time period (i.e. a timer).
- Change settings by first tapping the "Add alarm" button, and then "Settings".
- Choose music to play when the alarm goes off.
- Mark a number of different ringtones, and the alarm will randomize every time it is activated.
- Change volume.
- Enable/disable mini-games when the alarm goes off.
- Enable/disable vibration.
- Set a snooze interval, i.e. the timer between you have tapped the 'snooze'-button until it will be activated again.
- Set alarms on specific days.
- Deactivate alarms after they have been added.
- Remove alarms after they have been added.

What you cannot do:
- Edit an alarm after it has been added.
